The situational task "Pneumoconiosis"

Patient N., 42, went to the clinic complaining of cough, shortness of breath, chest pain. He has been ill for the past 5 years when the first cough with a lot of phlegm first appeared. The current deterioration is due to a cooling last week.

From the anamnesis it is known that for 32 years the patient worked at a coal mine in the position of a mining working face, where it was subject to the effects of harmful factors.

To the task is added a radiograph, data san-gig. characteristics, surveys, etc.

Task:

1. Determine harmful factors and associate it with an occupational disease
2. Characterize signs of occupational disease based on clinical syndromes, data of laboratory and instrumental examination
3. Establish complete clinical diagnosis of pneumoconiosis in accordance with the generally accepted classification.
