

Station № ____

"ORTHOPEdic DENTISTRY"

Scenario № IIp2

A 73-year-old patient came to the orthopedic dentistry clinic with complaints of dysfunction of chewing and speech, complete absence of teeth. Based on the survey survey and instrumental examination, it is planned to make two complete removable dentures (for the upper and lower jaws). At this clinical stage, the doctor plans to take anatomical impressions.

Task: Carry out the first stage of prosthetics.
