Algorithm
"Examination of a venereal patient with discharge from the urethra "

1. Say hello to the patient.

2. Introduce yourself.

3. Identify the patient (name, age).

4. Clarify and detail complaints:

   - discharge from the urethra:
     - kind: purulent (yellow-green), mucous, transparent, cloudy (milky)
     - quantity: abundant, moderate, poor.
     - smell: odorless, with an unpleasant smell, with the smell of "spoiled fish"
     - clarify the time of the appearance of discharge (in the morning or constantly during the day)
   - subjective sensations: itching, burning, cramps, pain.
   - clarify the relationship of subjective sensations with urination
   - change in frequency of urination
   - find out the general condition of the patient: weakness, lethargy, malaise, fever

5. To ask the medical history:
   - duration of the disease - when the first symptoms of the disease appeared
   - what were the first symptoms of the disease
   - development of the disease - the sequence of the appearance of complaints
   - previous treatment and its results
   - the possible cause of the onset of the disease, according to the patient

6. Based on complaints, medical history and clinical picture (photo illustration), establish a preliminary diagnosis.

7. Request the results of examinations required for the clinical diagnosis.

8. Make a clinical diagnosis.
